

# Small/Medium Café

Application

Optimal Audio

A café needs simplicity of use for its staff, and useful features to make life easier.

In this small to medium sized Café, the use of a Zone 4P means no external amplification is required.

A microphone in the café allows orders to be passed to kitchen staff. Having a local input and loudspeakers in the kitchen also means the kitchen staff can play their own music.

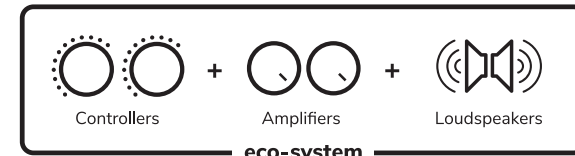

Each of the three remaining amplifier channels are used to drive a pair of UP 4 loudspeakers, giving great quality and the opportunity for good volume levels should they be required.

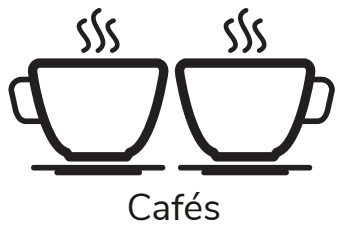

Having the Zone 4P installed away from the food serving and preparation area keeps it clean and tidy, and operation for the café from the easy to use ZonePad 1 keeps life simple for users.
