Optimal Audio

Great live sound quality and ease of use for the staff are key requirements in this popular venue type.

This venue for local bands and chilled DJ performance has a main room with the performance area, and a separate, quieter lounge where the main room's performance can be relayed or alternative music sources can be played.

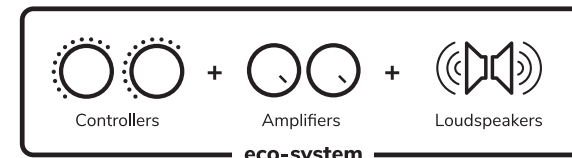

A "front desk" microphone for the main room allows announcements such as start times for events to be relayed, along with a ZonePad1 for overall volume and music source control. For the lounge, that function is carried out from the Zone 8 itself.

The Zone 8 is carrying out all the necessary processing for the loudspeakers, so in this instance there is no need to use the loudspeaker pre-sets in the SmartAmps.

In the main room Cuboid 8 loudspeakers, associated with Sub 10s provide full bandwidth, quality sound for performing artists and appropriate sound levels for the venue.

Speakers in the kitchen keep staff entertained, and speakers in the toilets mean no-one has to miss out on the performance.
